

Have you seen this..?

Chestnut Blight -

Chestnut blight cankers on several stems of coppiced sweet chestnut in a plantation

Dead, retained leaves above a girdling canker caused by *Cryphonectria parasitica*

Fruiting bodies of *Cryphonectria parasitica* on the surface of an infected stem

Mycelial fans evident beneath the bark of a canker caused by *Cryphonectria parasitica*

You can learn more about the project and the pests and diseases we are most concerned about, please visit **www.observatree.org.uk**

If you think you have seen something unusual and would like to find out what you need to report, please visit

www.forestry.gov.uk/treealert

Observatree is a citizen science project led by Forest Research, in collaboration with key organisations

Previously 50% funded by the EU's LIFE+ Programme (2013-2017)
